

What's the difference between Import#, Photo# and Sequence#?

Import # is a number identifying that particular import (i.e. the memory card number, which you may wish to combine with Sequence #)

Photo # is an ever increasing number that doesn't automatically reset.

Both Import # and Photo # have starting numbers set in Catalog Settings > File Handling panel, with Import Number used for 'Import #' and Photos Imported used for 'Photo #'.

Sequence # is an increasing number which starts at the number of your choice each time you use it – you set the start number in the Rename dialog. It's probably the most useful of the automatic numbers, and the variety we're most familiar with from other programs.

See '[How do I pad the numbers to get lmg001.jpg instead of lmg1.jpg](#)' on page 132
